

Setup guid for "DenkeLicht"

Fist you have to Download the "blynk" App.

Than you have to creat a account. (i recomend to google it or look on yt after a video if you need help on this step).

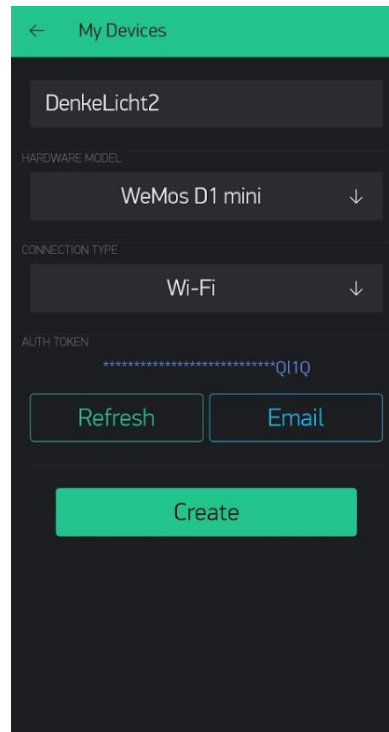

Than you can creat a new project.

like shown in this picture.

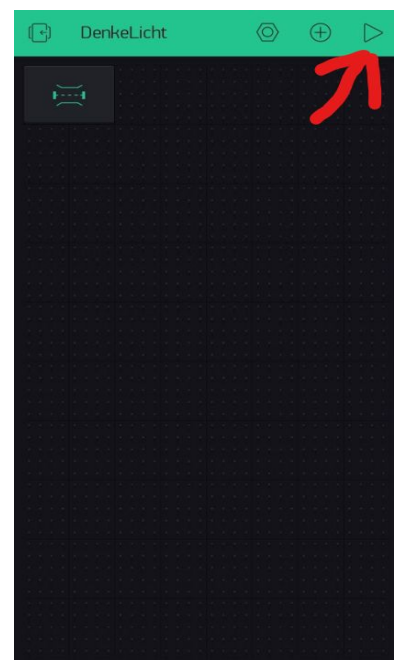

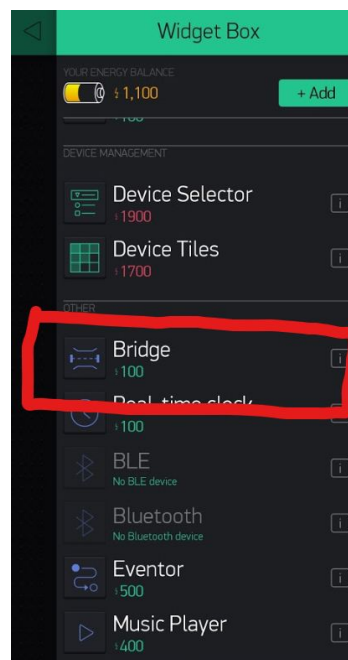

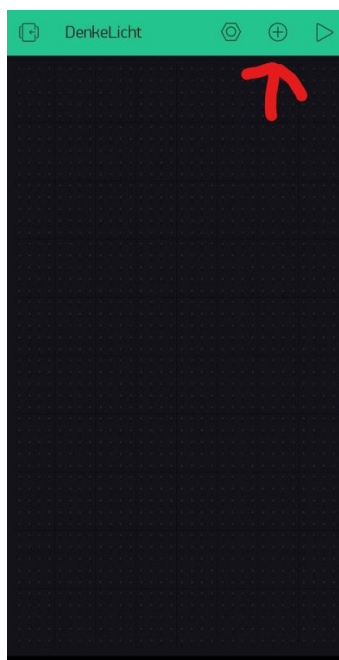

After you done this you must add a second device in the project settings

Just like at the beginning

Just a few more steps in the app and we are nearly done

at the next step you just have to place the "Bridge"-Widget and press start

Now you can close the app and we can start to program the Wemos Chips.
